PROJECTS

1. **Pathagar** (Full-Stack team project) **[**[Website](#)**]** **[**[Client Code](#)**]** **[**[Server Code](#)**]**

   - **Technologies used**: React JS, Tailwind, Daisy UI, React router, Firebase Node js(express js), Mongodb, socket io.
   - **Site overview**:
     - This is a website where you can buy online courses and also can buy different categories of book.
     - It's a team project, so I mostly have worked on the backend part and also did some work on the homepage as well.
     - The website is responsive for both desktop and mobile users.

2. **Car Parts Manufacturer** (Full-Stack project) **[**[Website](#)**]** **[**[Client Code](#)**]** **[**[Server Code](#)**]**

   - **Technologies used**: React.js, React-Router, Tailwind CSS, Daisy UI, FontAwesome, React Query, React hook form, NodeJS, ExpressJS, MongoDB.
   - **Site overview**:
     - This is a site where users can buy different parts of car
     - User can order product, pay for the product and add a review
     - Admin can add a product, manage products, delete a product and update product condition. To check admin control, login with gmail: dddd@gmail.com, password: ddddgmail

3. **Fruits Warehouse** (Full-Stack project) **[**[Website](#)**]** **[**[Client Code](#)**]** **[**[Server Code](#)**]**

   - **Technologies used**: React, React-Router, Bootstrap Firebase, NodeJS, ExpressJS, MongoDB.
   - **Site overview**:
     - This is a website where you will find users supplying their fruits.you can also display your fruits by login into the website.

- Once you logged in, you can update and delete your product.
- The website is responsive for both desktop and mobile users.
